ROTARY MOWER

MODELS

5-0610 & 5-0701

DESCRIPTION

The Model 5-0610 mower is a rear discharge mower and the Model 5-0701 has a side discharge. Either mower is designed to fit 7 h.p. and 8 h.p. vertical crankshaft tractors. It is shipped completely assembled. Only the lift link location and length need be checked before the mower is installed on a tractor.

INSTALLATION PROCEDURE

The lift link should measure $2\frac{3}{8}$ " from the center of the bend to the face of the nut next to the lift stud. See Figure 1. Turn the nut as necessary to set the distance. This is a basic setting. After the mower is installed, the link can be shortened to provide the highest possible travel position for the mower.

FIGURE 1

On 7 h.p. models, install the lift link in the front hole of the lift link bracket. On 8 h.p. models, install it in the rear hole. The lift stud must enter the bracket from the left side and is secured with a hairpin cotter. See Figure 2.

From beneath the tractor, feed a loop of the drive belt forward through the attachment belt guard (lower loop) which is located just to the rear of the engine pulley, and wrap it into the power take-off groove of the engine pulley (bottom groove).

Twist the left and right belt strands one-quarter turn and fit them between the belt guides and into the grooves of their respective idler pulleys. The right hand pulley is visible to the rear of the foot rest in Figure 3. Lodge the free loop of the belt temporarily up out of the way under the tractor and proceed with the mower installation.

Turn the steering wheel fully to the left. Set the mower wheels in the lowest cutting position. Slide the mower under the tractor from the right side, working it back and forth carefully to avoid damaging the idler pulley belt guides. Center the mower under the tractor.

Drop the free loop of the drive belt between the rails of the mower lift assembly. Pass it under the lift bracket, through the belt guide, and into the groove of the mower pulley.

Move the tractor lift lever forward to its lowest position. Connect the mower lift link to the lift plate of the tractor by inserting the end of the link from

the left side into the front hole of the plate. Secure it with a hairpin cotter.

Remove the hairpin cotter from one end of the attachment pivot rod, Figure 3, and withdraw the rod from the tractor frame. Raise the mower lift rails and align the pivot holes with the corresponding holes in the tractor frame. If drive belt tension makes it difficult to align the pivot rod holes, prop the attachment clutch lever at the right side of the hood stand in the raised (released) position. Reinstall the pivot rod through the tractor frame and mower lift rails and secure with a hairpin cotter.

Raise the mower to travel position. If the mower deck hangs either high or low in front, loosen the lock nut on the leveler, Figure 2, and turn the leveler in or out as necessary to make the mower deck ride level to $\frac{1}{8}$ " low in front. Tighten the lock nut securely.

For proper tensioning of the drive belt, see tractor owners manual.

MOWER REMOVAL

Set the mower wheels in the lowest cutting position and disengage the attachment clutch. Turn the front wheels to the extreme left and move the tractor lift lever to its lowest position. Remove the hairpin cotter from one end of the attachment pivot rod and withdraw it from the tractor frame. This will drop the mower lift rails. Reinstall the attachment pivot rod in the tractor frame and secure with a hairpin cotter.

FIGURE 2

Remove the hairpin cotter and disengage the lift link from the tractor lift plate. Roll the mower a little to the rear and disengage the drive belt from the mower pulley. Withdraw the belt from the belt guide on the mower lift assembly. Slide the mower carefully to the right and out from under the tractor.

OPERATION

1. Lift the mower with the tractor lift lever to remove weight of the mower from the gauge wheels. **Note:** Never stand on the mower.

2. Turn the height adjusting screw to raise or lower the gauge wheels to the desired cutting height (see decal on mower deck). The recommended cutting height is two to three inches.

3. Disengage the attachment clutch by lifting the lever on the right side of the hood stand and lower the mower before starting the tractor engine.

4. Start the engine and slowly engage the attachment clutch. For best cutting results on average level lawns, operate the tractor at full throttle in 2nd gear with a mechanical transmission or half speed (approx. $2\frac{1}{2}$ m.p.h.) with an automatic transmission. If ground speed is too fast, mowing will be uneven because the mower blades will not have time to lift each blade of grass into cutting position.

5. To mow extra tall grass or grass containing lots of moisture, raise the mower to the highest position for the first cut using the lowest drive speed. Then recut to normal height.

MAINTENANCE

The mower requires no lubrication. Blades and belts are serviced with the mower removed from the tractor. See mower removal instructions.

Blade Maintenance:

Invert the mower. Remove the three blade attaching bolts and special washers. Lift the blades off the spindles.

File or grind the blades evenly, taking care to retain the original cutting edge angle and blade balance.

Reinstall the blades, making sure the pins protruding from the spindle cups engage the blades properly. The side of the blade with the lift area (turned up section) must be installed facing the mower deck. Tighten the blade attaching screws to a torque of 35 Ft./Lbs. These screws, Part No. 908033-6 should be replaced after every two or three times they are removed and reinstalled.

Mower Belt Replacement:

Remove the drag link bracket bolts, Figure 2, at the R.H. and L.H. mower deck brackets and remove the lift assembly from the mower. Remove the belt cover nuts and lift the cover off the mower deck.

Remove the old belt and install the new belt in accordance with the belt diagram decal on the belt cover. Reinstall the belt cover and lift assembly.

FIGURE 3

SAFETY TIPS FOR RIDING LAWN MOWERS, GARDEN TRACTORS AND ATTACHMENTS

1. Know the controls and how to stop quickly — READ THE OWNER'S MANUAL.
2. Do not allow children to operate machine; nor adults to operate it without proper instruction.
3. Clear work area of objects which might be picked up and thrown.
4. Disengage all clutches and shift into neutral before starting motor. Keep hands, feet and clothing away from power-driven parts.
5. Do NOT carry passengers. Keep children and pets a safe distance away.
6. Never direct discharge of any material toward bystanders nor allow anyone near machine while in operation.
7. Disengage power to any attachment and stop motor before leaving operating position.
8. Take precautions when leaving machine unattended (to avoid accidental starting, rolling away, accidental dropping of any attachment, etc.)
9. Disengage power to any attachment whenever it is not in use or when traveling from one work area to another.
10. Stay alert for holes and other hidden hazards.
11. Know what is behind you before backing up.
12. Beware of steep slopes; reduce speed on all side slopes and sharp turns to prevent tipping or losing control.
13. Don't stop or start suddenly when going uphill or downhill.
14. Use extra care when pulling loads or using heavy equipment. (Refer to your owner's manual.)
15. Watch out for traffic when near roadways.
16. Handle gasoline with care — it is highly flammable.
 - A. Use approved gasoline container.
 - B. Never add gasoline to a running motor — fill tank out of doors and wipe up spilled gasoline.
 - C. Replace gasoline cap securely.
 - D. Open doors if motor is run in garage — exhaust gases are dangerous.
17. Keep machine in good operating condition and keep safety devices in place. Use guards as instructed in owner's manual.
18. Disengage power to any attachment and stop motor before making repairs or adjustments.

PARTS LIST FOR 5-0610 & 5-0701 ROTARY MOWERS

When ordering parts always list Part No. and name of Part.

Parts available only through Authorized Dealers.

(Specifications subject to change without notice.)

Item No.	Part No.	Description	No. Req'd.	Item No.	Part No.	Description	No. Req'd.
1	100471	Deck — Mower (Model 5-0610)	1	38	915663-4	Nut Elastic Stop $\frac{3}{8}$ -16	11
